EDUCATION

DTU (Denmark's Technical University)

September 2018 – December 2020

MSc Mathematical Modelling and Computation - Applied Mathematics

Copenhagen, Denmark

Double degree program with École Centrale Paris. DTU is a leading European technical university.

- GPA: 10.6/12
- Subjects: Time Series Analysis, Deep Reinforcement Learning, Constrained Optimization, Multivariate Statistics

École Centrale Paris (CentraleSupélec)

September 2015 – December 2020

Master of Engineering

Paris, France

École Centrale Paris (now CentraleSupélec) is one of France's most renowned postgraduate engineering schools, focused on training top-level generalist engineers.

- Subjects: Functional Analysis, Statistics, Probability Theory, Partial Differential Equations, Software Engineering, Quantum Physics

EXPERIENCE

Electricity Maps

March 2025 – February 2026

Lead Engineer

Copenhagen, Denmark

- Drove a cross-team effort to make the value of Electricity Maps' data shine through the product: agent-based integration of Electricity Maps' global forecasting engine into the map. Surfaced it to 50,000+ daily users. [TypeScript, Cursor]
- Developed an analytical engine to generate a live, high-level overview of data availability. Millions of rows and dozens of columns of constantly changing time-series data summarized in a digestible coverage tool. [SQL, Dataform, TypeScript]
- API ownership: homogenization, development guidelines design, documentation, accurate logging for Electricity Maps' commercial API. Serving 500,000+ unique users per day. [TypeScript]

Electricity Maps

July 2024 – March 2025

Team Lead

Copenhagen, Denmark

- Led the expansion of the forecasting team to support commercial interest in global forecasts. The team grew from four to eight.
- Defined and tracked success metrics, improving forecast quality to meet customers' standards.
- Management duties: periodic 1:1s, goal setting, feedback sessions and building team culture.
- Thought leadership: represented Electricity Maps at conferences (e.g. GreenIO 2024) and workshops. Carbon-aware computing advocacy, chapter authorship in *Scheduling Variable Capacity Resources for Sustainability*.

Electricity Maps

February 2023 – July 2024

Tech Lead

Copenhagen, Denmark

- Architect of Electricity Maps' global forecasting system. Conceptual design, initial implementation and cross-functional collaboration. Delivered thousands of ML models interwoven to predict the future state of the electricity grid. [Python, Apache Beam]
- Represented the team with key customers and shaped contract terms. Closed a \$500,000+ deal.
- Foundational work for continuous data quality evaluation. Outlier detection algorithms and infrastructure. [Apache Beam, SQL]

Electricity Maps

April 2021 – February 2023

Data Scientist

Copenhagen, Denmark

- Built time-series gap-filling models to ensure data completeness for hundreds of zones. Defined and upheld completeness SLOs for our largest customer (Google). [Apache Beam, scikit-learn]
- Foundational work for expanding Electricity Maps' geographical coverage. Estimation models, data processing pipelines and integration. Added the first dozen synthetic zones to Electricity Maps. [Apache Beam, scikit-learn]

DTU (Denmark's Technical University)

February 2021 – April 2021

Research Assistant

Copenhagen, Denmark

- Developed a novel method for robust uncertainty quantification using out-of-distribution pseudo-inputs training. Pending pres

Electricity Maps

March 2020 – February 2021

Student Assistant

Copenhagen, Denmark

- Design and implementation of an automatic carbon footprint engine (prototype accounting SaaS). [Python]
